

MediMax Software June, 2014 Version V1E

Preparers VERY IMPORTANT

- d. Each backup run identifies the current drive location and xx number used for the BACKUPxx folder name at the time the backup is run.
- e. Therefore, in the course of preparing a single cost report, a preparer may have, for instance, made fifteen backups. In this case, if the preparer created all

Example: If the desired network server location for all cost report
